## Executive overview

At the end of 2025, Mastercard will cease distribution of the T217 file containing contact and business identification number (BIN) information.

**Table 1: Effective date details**

Date	Details
31 December 2025	The monthly T217 file will no longer be distributed

## Customer benefit

Information contained in static reports, such as the T217 file, often becomes outdated upon publication. To avoid this problem, customers can access up-to-date information (including BINs and contacts) through the Mastercard resources outlined in this announcement. This process change helps Mastercard ensure that its customers are accessing up-to-date information.

## What Mastercard is doing

To locate customer contact information, use:

- **My Company Manager**

- Use the Contact tab in the My Company Manager application in Mastercard Connect to quickly identify the most up-to-date contacts across customers. You can search by Company, ICA, and BIN for various contact types.

To locate BIN information, use:

- **BIN Lookup API**

- The BIN Lookup service provides two distinct APIs, a full or filtered list of available Mastercard BINs, and information for a single BIN. Information about the service is accessible here: <https://developer.mastercard.com/bin-lookup/documentation/>

- **Simple BIN Account Range File (SBART)**

- A BIN Account Range Table is a list of instructions that provides parties in the payment ecosystem with accurate and current account range assignment information for routing transactions globally. Mastercard provides direct access to accurate and up-to-date BIN and account range data through a series of resource files. These files are accessible here: <https://developer.mastercard.com/bin-lookup/documentation/sbart-file/>

For assistance with locating BIN information that is not otherwise available in the BIN Lookup API or SBART, please contact

[DBN.BinTableResource.Support@mastercard.com](mailto:DBN.BinTableResource.Support@mastercard.com). This team can also assist with identifying the best resource for the use case.
